

4.5 Meter Trifold[®] Transportable

The ASC Signal 4.5 Meter Trifold[®] antenna is designed for worldwide use in transportable applications serving high density data, voice and communications networks. Like all ASC Signal earth station antennas, this Transportable Earth Station Antenna provides high gain and exceptional pattern characteristics. The electrical performance and exceptional versatility allows configuration with your choice of transmit/receive feed assemblies. Designed to meet a wide range of regulatory standards, including INTELSAT's standard F1 and E2 specifications. The antenna's Trifold[®] reflector panels are cut from a single-piece of precision spun aluminum. Each panel is designed and manufactured to provide excellent thermal expansion characteristics and ensures the extremely accurate surface contour.

All Trifold[®] antennas meet or exceed Asiasat, Eutelsat, Panamsat, and INTELSAT's F-1 and E-2 requirements. In addition, they meet or exceed ITU-R S.580 and S.465 recommendations for pattern performance for 2° satellite spacing.

The unique Trifold[®] design enables one-person deployment in less than 30 minutes. A large range of adjustment provides non-critical positioner/trailer orientation and allows viewing of geostationary satellites, horizon to horizon, from any location world wide. An aluminum back structure and hot-dipped galvanized steel positioner maintain pointing accuracy, durability and reliability.
